

How can you **reduce** energy waste in your industrial facility?

Industrial facilities accounted for **60 percent** of all energy consumed in the United States in 2016. However, on average, **30 percent** of the energy in buildings is wasted. This waste adds up quickly and can impact your bottom line. By recognizing the greatest energy wasters in your facilities and adjusting your energy management strategy, your company can make changes to lower energy consumption.

LEARN HOW Constellation's **Efficiency Made Easy®** program can help you make efficiency updates to your facilities to reduce your energy consumption.
